PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience building and deploying production-level applications, including multi-tenant SaaS platforms, fintech systems, inventory management solutions, mobile applications, and computer vision software. Highly capable of designing and developing end-to-end systems independently—from high-end UI/UX implementation to complex backend architecture, database design, robust authentication, and payment integrations. Proven track record of building scalable APIs, real-time event-driven systems, and offline-first applications.

CORE TECHNICAL SKILLS

Frontend	React.js, Next.js, HTML5, CSS3, JavaScript (ES6+), Responsive UI Design, State Management
Backend	Node.js, Express.js, NestJS, RESTful API Design, Middleware Architecture, Secure Backends
Databases	MongoDB, Data Modeling, Aggregation Pipelines, Schema Design, CRUD Optimization
Mobile	React Native, Offline Functionality, Payment Flows, QR/Barcode Features, Contact Integrations
Fintech & Payments	OPay API, Monnify API, VTpass API, Virtual Accounts, Wallet Funding, Webhook Handling
Auth & Real-Time	JWT Authentication, RBAC, Socket.io, Event-Driven Architecture, Data Synchronization
Computer Vision	C++ (Intermediate), OpenCV, Facial Recognition Systems, Image Processing, Object Detection

PROFESSIONAL EXPERIENCE

YSSStore – SaaS POS & Inventory Management Platform

Lead Full-Stack Engineer

Designed and built a full production-ready multi-tenant SaaS platform tailored for retail operations.

- Engineered a highly responsive multi-role frontend (Admin, Staff, Delivery Agents, Super Admin) and scalable backend.
- Built a comprehensive inventory and sales management system featuring barcode scanning and automated receipt generation.
- Implemented robust offline-first architecture with automatic data synchronization and real-time updates utilizing Socket.io.
- Tech Stack:** React, React Native, Node.js, Express.js, MongoDB, Socket.io.

YS Sub – Fintech & Digital Service Platform

Backend & Integration Engineer

Built a secure, automated financial transaction system integrated with major Nigerian payment providers.

- Successfully integrated OPay, Monnify, and VTpass APIs to facilitate seamless airtime, data, and utility bill payments.
- Architected virtual account creation logic and scalable user wallet funding infrastructures.
- Designed a secure webhook system for transaction verification and built robust flows with multiple authentication layers.

Facial Recognition System

Computer Vision Developer

Developed a standalone technical project focused on biometric identification and computer vision.

- Built a complete face detection and recognition pipeline from scratch utilizing C++ and OpenCV.
- Implemented advanced image preprocessing, real-time recognition logic, and detailed image analysis.

Production Mobile Applications

Mobile App Developer

Built cross-platform mobile applications in React Native focusing on real-world utility and premium UI design.

- Integrated native device contacts, API-driven architecture, and user-based data selection mechanisms.
- Implemented secure payment workflows, sophisticated session handling, and advanced authentication protocols.

ADDITIONAL PROJECTS

EmpowerPath

Architected a talent discovery engine with an integrated scoring logic system for professional roadmaps.

Damale Gas & BLK Systems

Developed specialized inventory management platforms configured to track mass, sales, and operational losses.

Corporate Branding

Executed high-end UI/UX and system designs for platforms including Katsina Biodiversity and Ks Bank.

Game Development

Programmed JavaScript-based games including physics puzzles, a Mario-style platformer, and a Subway Surfers-style runner.

EDUCATION & LANGUAGES

Federal College of Education, Katsina

Completed rigorous academic coursework and practical applications.

- **Achievement:** Successfully completed the Teaching Practice Program, earning a Credit (B) grade.

LANGUAGES

English (Fluent)

Hausa (Native/Fluent)

KEY STRENGTHS

- End-to-End System Architecture
- Fintech Integrations & Payment Flows
- Complex Debugging & Multi-System Logic
- Fast Adoption of Production Tech
